22:12:56	Collected Cluster Metrics
22:12:56	Evidence Collection Complete
22:12:56	Root Cause Generated

Times are when the platform completed each collection step.

Root Cause

The diagnosis was generated from collected Kubernetes evidence. No failure pattern matched the observed signals.

Evidence

- 0 of 10 applicable evidence records were collected successfully.
- 1 record(s) did not apply to this cluster and were excluded from that figure.
- Gap - k8s.pods: Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Gap - k8s.events: Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Gap - k8s.deployments: Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Gap - k8s.network: Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Gap - k8s.nodes: Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Gap - k8s.storage: Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Gap - k8s.workloads: Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Gap - k8s.nodes.raw: Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Gap - k8s.pods.logs: Skipped because required evidence was unavailable: k8s.pods.
- Gap - k8s.metrics.nodes: metrics-server is unavailable or kubectl top is not permitted.
- Gap - k8s.metrics.pods: metrics-server is unavailable or kubectl top is not permitted.

Confidence Assessment

Overall confidence: 24%.

Resolution

Review the collected pod, event, deployment, and networking evidence for the first failing workload.

Lessons Learned

Evidence that would have shortened this investigation:

- No failing pod logs were collected.
- Metrics-server data is unavailable or not permitted.
- Storage resources could not be inspected.
- Node conditions could not be inspected.
- Unable to connect to Kubernetes cluster. Verify kubeconfig, cluster access, and kubectl permissions.
- Skipped because required evidence was unavailable: k8s.pods.
- metrics-server is unavailable or kubectl top is not permitted.

Preventive Actions

Add health checks, clear rollout alerts, and deployment validation for Kubernetes manifests.

Follow-up actions:

- Review warning events and failing workload conditions first.
- Collect additional logs or metrics for any workload with unclear evidence.

Appendix: Commands Executed

```
kubectl --chunk-size=500 get events -n default -o json
kubectl --chunk-size=500 get deployments -n default -o json
kubectl --chunk-size=500 get pods -n default -o json
kubectl --chunk-size=500 get services -n default -o json
kubectl --chunk-size=500 get endpoints -n default -o json
kubectl --chunk-size=500 get nodes -o json
kubectl --chunk-size=500 get pvc -n default -o json
kubectl --chunk-size=500 get pv -o json
kubectl --chunk-size=500 get statefulsets -n default -o json
```

```
kubectl --chunk-size=500 get daemonsets -n default -o json
```

```
kubectl --chunk-size=500 get jobs -n default -o json
```

```
kubectl --chunk-size=500 get cronjobs -n default -o json
```

```
kubectl --chunk-size=500 get nodes -o json
```

```
kubectl top pods -A --no-headers
```

```
kubectl top nodes --no-headers
```

Every command the platform ran during this investigation. All are read-only; the platform cannot modify a cluster.
